## 2019 REVIEW

---

At the start of 2019 I was comfortably developing my role as the Center of Excellence for Procurement at RaceTrac Petroleum. I was able to craft my role to my passions in analytics. I developed reporting primarily using Excel, SQL, and PowerBI. I also successfully transitioned category management of general supplies that showcased my ability to train on reporting tools I developed.

This year also lead to a shift in my career as I left procurement and entered finance. EY has provided me the opportunity to further develop my finance acumen while also growing accustomed to global operations. Today I have been in the role for 6 months and I eagerly set out to take an analytical approach to my role.

A large component of my growth surround learning. This year I have been able to go back to the traditional educational model in addition to professional development. I completed the Data Science and Analytics Certification at Georgia Tech. I have also started my MBA at Georgia State. The final push for education has been to prepare my portfolio for my application to the MSA program at Georgia State.

## 2020 GOALS

The above graph shows my skills at their current level. For 2020 I intend to increase my competency in each of the platforms and languages. As I gear up for the intense coursework presented in the MSA program I will encourage my growth by launching my own data projects (Kaggle, TidyTuesday).

In addition to increasing current skills I need to set the foundation for advance math metrics. Primarily advanced statistics in order to prove significance in project findings.

## 2020 MILESTONES

I anticipate the distribution of my growth to be broken out in the categories to the right. The highlight will be transitioning into the MSA program. This major milestone will mark my journey that has been finding passion in my work and growing my value add skills.
